I am good at understanding complex systems and chopping them down into smaller solutions. I enjoy making this look easy by explaining it well.

I gain energy on working with people who care, on a product that matters.

I like to write software to solve problems, not just for the sake of it. But I do that properly, so I can sleep sound even when I'm on call (yes, DevOps makes sense).

I like to create AND own a product, spike it, build it, run it, tweak it and be proud of it.
